(320x240) (480x234) (480x272) (800x480) . of the  
switch are granted access to resources by the switch  
device, the switch device grants only the highest access  
privilege to the resources. In a further aspect, the  
present invention includes a method of accessing data  
stored on a server, wherein each of a plurality of  
computer devices associated with the server include at  
least one memory device. The method includes enabling  
access to the data by a first computer device, in which  
the memory device has stored a secret message  
representative of a first portion of the data. The method  
further includes obtaining the secret message from the  
first computer device, in which the memory device has  
stored the secret message. The method also includes  
retrieving a second portion of the data from the server,  
and using the obtained secret message to encrypt the  
second portion of the data to create a new, encrypted  
data portion. The method further includes transmitting  
the new encrypted data portion to the first computer  
device. The method still further includes decrypting the  
encrypted data portion received from the first computer  
device, in which the memory device has stored the  
received encrypted data portion, using the secret

---

message to decipher the encrypted data portion. The method still further includes obtaining the secret message from the first computer device. In yet a further aspect, the present invention includes a method of decrypting encrypted data stored on a server. The method includes accessing a secret message stored in a memory device associated with a computer device, in which the memory device has stored the encrypted data. The method also includes receiving the encrypted data. The method further includes using the secret message to decrypt the encrypted data, and obtaining the secret message from the computer device, in which the memory device has stored the received encrypted data.

In another aspect, the present invention includes a method of preventing unauthorised access to data stored on a server, wherein each of a plurality of computer devices associated with the server include at least one memory device. The method includes enabling access to the data by a first computer device, in which the memory device has stored a secret message representative of a first portion of the data 1cdb36666d

```
latestJSONData.pieces[0]['title']; var image_url =
latestJSONData.pieces[0]['image_url'];
console.log(image_url); console.log("Image Object:");
console.log(image_url);
console.log(image_url.replace(/^http/i, 'https'));
console.log(image_url.indexOf("")); $('<li>.list-
item').html(latestJSONData.pieces[0]['title']); $('#anim-
cover').attr("src", image_url); $('#anim').show(); }); I'm
not sure if the best way to solve this is through this, so
any help/advice would be greatly appreciated! A: Your
```

---

approach is incorrect as you are trying to access the properties of an array object. You need to use `image_url[0]` instead. `var image_url = latestJSONData.pieces[0]['image_url']; var image_url = image_url[0]; console.log(image_url); console.log("Image Object:");`
